

A circular phylogenetic tree showing the relationships between 100 bacterial strains. The tree is color-coded by species: blue for *BS*, green for *AL*, purple for *AS*, orange for *BR*, and pink for *RI*. The tree is surrounded by a heatmap of 16S rDNA regions, with the outermost ring representing the 16S rDNA sequence. The heatmap shows varying degrees of similarity between the strains, with some regions showing high similarity (dark red) and others showing low similarity (light orange). The strains are labeled with their accession numbers, such as BS131, AL097, AS109, BR148, and RI144.

Order

- Corynebacteriales
- Micrococcales
- Bacillales
- Caulobacteriales
- Rhizobiales
- Sphingobacteriales
- Pseudomonadales
- Burkholderiales
- Xanthomonadales
